
Induction heuristics

Basic heuristics

Theorems about recursive functions are proved by
induction

Basic heuristics

Theorems about recursive functions are proved by
induction

Induction on argument number i of f
if f is defined by recursion on argument number i

A tail recursive reverse

primrec *itrev* :: 'a list \Rightarrow 'a list \Rightarrow 'a list

A tail recursive reverse

primrec *itrev* :: 'a list \Rightarrow 'a list \Rightarrow 'a list
itrev [] *ys* = *ys* |
itrev (x#xs) *ys* =

A tail recursive reverse

primrec *itrev* :: 'a list \Rightarrow 'a list \Rightarrow 'a list
itrev [] *ys* = *ys* |
itrev (x#xs) *ys* = *itrev* xs (x#*ys*)

A tail recursive reverse

primrec *itrev* :: 'a list \Rightarrow 'a list \Rightarrow 'a list

itrev [] *ys* = *ys* |

itrev (x#xs) *ys* = *itrev* xs (x#*ys*)

lemma *itrev* xs [] = *rev* xs

A tail recursive reverse

primrec *itrev* :: 'a list \Rightarrow 'a list \Rightarrow 'a list

itrev [] *ys* = *ys* |

itrev (x#xs) *ys* = *itrev* xs (x#*ys*)

lemma *itrev* xs [] = *rev* xs

Why in this direction?

A tail recursive reverse

primrec *itrev* :: 'a list \Rightarrow 'a list \Rightarrow 'a list

itrev [] *ys* = *ys* |

itrev (x#xs) *ys* = *itrev* xs (x#*ys*)

lemma *itrev* xs [] = *rev* xs

Why in this direction?

Because the lhs is “more complex” than the rhs.

Demo: first proof attempt

Generalisation (1)

Replace constants by variables

lemma *itrev xs ys = rev xs @ ys*

Demo: second proof attempt

Generalisation (2)

Quantify free variables by \forall
(except the induction variable)

lemma $\forall ys. \text{itrev } xs \ ys = \text{rev } xs \ @ \ ys$
